Thomas Piketty’s bestseller, Capital in the Twenty-First Century, drew the media spotlight towards inequality, an issue at the heart of our fight as socialists and social democrats. Since then, inequality has been studied, analysed, researched, and often highlighted as a rising concern for our societies. Today, the issue is widely recognised, including by international organisations such as the IMF and the OECD.

However, even with this broader recognition of the problem, the political world is still far from reaching a consensus on how to reduce inequality in our societies.

As European socialists, our baseline principle is that the high levels of inequality we are facing are not automatic or inevitable. They are the result of political choices that shape policies and structures that guide our economy, determining how we live together. That makes them even more unacceptable.

As socialists, we are continuously challenging neoliberal policies and fighting to reshape our societies’ structures so they can work for all. As Amartya Sen once put it, „A society can be Pareto optimal and still perfectly disgusting.“ This is why we want to ensure an economy that puts people first, where all workers, whatever their status, benefit from protection and decent jobs. This is why we promote measures that reduce social inequalities, fight poverty and increase solidarity. We want to fight inequality in all spheres of our societies and bring the inequality debate back into the European project.

Over more than a year, the PES Social Europe Network led by Pervenche Berès has developed concrete policy proposals to combat income and wealth inequality in Europe. The brochure you have in your hands presents the outcome of this enriching exchange. I hope you will enjoy reading it.

Inequality has been a major area of PES work. Considering the magnitude of the challenge, it will remain our priority for the years to come. This is the main issue that can regain citizens’ trust in the EU. This is the objective that should redefine the European project so that the EU can aim at truly shared prosperity.

Clearly, it is the priority that we will raise in the upcoming European elections, for a more equal, fairer and more sustainable European Union.

PES President

Sergei Stanishev
Our society only has a viable future if it promotes equality amongst its citizens. For us, this means that fighting inequality must be a European priority, a red thread running through European politics, a benchmark to evaluate all our public policy. A successful European Union is one that reduces inequality both between and within its member states. However, so far, inequality has not been paid enough attention. Rising inequality has become one of the biggest problems of Europe. This clearly has to change. As PES, we keep fighting to achieve this change.

This is why I am proud of the work of our Social Europe Network on this very topic, led by MEP Pervenche Berès. With representatives from PES member parties, NGOs, social partners and MEPs, the network engaged in an in-depth discussion on the rise of inequality in Europe and how to combat it.

The document in your hands gives an account of the dimensions of rising inequality and the political, social and economic factors that are behind it. It looks at the role of EU and national policy-making as factors of inequality, as well as structural factors such as corporate governance, financialisation, and the digital revolution.

But the paper does not stop at mapping out the challenges. It also offers policy solutions for each of them. As is necessary if we are to tackle the issue of inequality comprehensively, this covers a wide range of areas: a stronger social dimension in European policy, initiatives to strengthen labour rights and workplace democracy, reform of the financial system, more progressive tax and public spending policies, social and productive investment, and ending discrimination.

We do not pretend to have achieved an exhaustive list of measures to end inequality in Europe. But this document offers a solid set of proposals to combat inequality in many of its aspects, and to prevent it from rising further in the years to come. The objectives are set. So now, let’s get to work!
The fundamental objective of the EU is to continuously improve the living and working conditions of its people. This is specified in the European treaties. It implies that everybody must be given the ability to contribute fully in society, enjoying equal opportunities and capabilities to pursue the future he or she have in mind.

Yet, inequalities are at a high level and rising. Growth might be back, but inequalities in economic development, in social opportunities, in employment and in wages are not. That’s why we, PES, are pushing for the fight against inequality to be included in the political agenda that is otherwise overwhelmed with financial issues and austerity. That’s why we work and campaign for decent wages, quality employment and a good work-life balance.

Inequalities will not disappear by magic. Wealth does not trickle down by itself; for this to happen, we need redistribution. We cannot let the wealthiest, whether individuals or companies, evade their responsibilities just so they can make more profit. That’s why we fight tax evasion, and why we want to make sure the financial sector contributes to the real economy, with a positive social and environmental impact. By setting minimum requirements for investors in terms of sustainability, from an environmental and a social perspective, sustainable finances can shift investment towards more sustainable projects and reduce inequality.

We are convinced that member states and the European Union have a role to play in bridging inequalities. Their role should be one of an entrepreneurial state, able to invest in the economy and job creation, and able to support social innovation. Member states, as well as the European Union, have a role to play in protecting its citizens in hard times, with a strong public social safety net as well as accessible and quality public services. They also have a role to play in supporting all citizens to achieve self-realisation with education, and social and cultural investment. That’s why we stand up against privatisation and deregulation, to strengthen the welfare state, and make sure it has the (financial) means to fulfill its mission.

We are pushing for a social turn in Europe and the fight continues. Our policy proposals are ready for implementation. It is up to us now to turn inequality into a core issue for the European elections next year. The fight against inequalities is the very field where we will make the difference.
Single mothers and their children are particularly vulnerable to economic inequality.
INTRODUCTION

The financial crisis in 2007 and its aftermath shed light on increasing inequality in and between countries. While inequality was long considered an inevitable result of economic growth, today organisations, including the IMF, OECD and ECB, acknowledge that tackling it is vital for our economies in order to foster sustainable growth and quality job creation. It is increasingly recognised that unequal societies curtail demand, weaken innovation, and underinvest in human capabilities and future common good, leading to more fragile financial systems and economies. However, combating inequality is not only economically important but more importantly of social, political and institutional concern, enabling our societies’ wellbeing, ability to build trust and strong social relations, guaranteeing support for democracy and democratic institutions. A just society will be difficult to achieve unless they are successfully enabled with an economy that works for all.

This is what we, as socialists and social democrats, have always stood for. Throughout our history we have been continuously fighting for equality — for a democratic society and economy that serves the people. Today, tackling inequalities is a central element and the red thread running through our work.

In this discussion paper, we provide a short overview of the context and development of inequality, before outlining drivers of inequality and possible policy solutions. Our primary focus is on equality of income and wealth. We believe that these are closely linked with equality of opportunity in particular access to quality public services and protection of social services of general interest, as well as political and civil equality. A just society will be difficult to achieve unless they are successfully enabled with an economy that works for all.
Rising levels of inequality have gained more attention in the last years, but they are not a recent phenomenon. According to the OECD, inequality increased in good as well as in bad times, with economic growth disproportionately benefiting higher income groups already before the crisis while leaving lower income groups behind.

The accumulation of power by big corporations, and waves of deregulation and privatisation, have further highlighted that shared growth cannot be taken for granted. High levels of inequality expose a trend towards economies that only work for the few — a shift of power away from workers and citizens towards capital.

The rise of inequality is not an unavoidable development, driven by an invisible hand, which leaves no alternative. It is the result of policies and structures guiding our economy. These policies, led by conservatives and liberals, can be changed. To do so the public authorities’ intervention is vital. Yet, living in a European Union and especially a union with a common currency, tackling inequality has to be jointly addressed. We cannot advance in isolation, and we cannot develop to the disadvantage of other regions — a Solidarity Union is needed. This is why the European Union plays such a crucial role.

Given this important role, and the fact that inequality has remained at historic heights over the past seven years, we deeply regret how little attention has been paid to inequality in EU policy making. For us, the economy must serve the people and not the other way round. In order to achieve this, an urgent shift is needed.

Our family has ceaselessly fought for a more social Europe. The proclamation of the European Pillar of Social Rights on 17 November 2017 in Gothenburg pointed in the right direction. We need to use the momentum. Combating inequality must be an institutional priority, placed at the top of the EU’s political agenda. As PES we will keep on fighting for it.

” For us, the economy must serve the people and not the other way round.”
The socio-economic divide within and between Member States in Europe has been on the rise in recent decades, and has intensified since the onset of the global financial crisis, leading to growth of income and wealth at the top, increasing poverty at the bottom and a declining middle class. All indicators are alerting us.

- In almost all European countries, market income inequality has grown substantially since the mid-1980s. It has significantly increased since the crisis and remains high despite the yet insufficient economic recovery.

- Disposable income inequality has been increasing in most European countries since the 1990s, with a growing share of disposable income going to the top.

- In the earlier phase of the crisis, taxes and cash transfers largely offset the increase in market income inequality, but redistribution has weakened or stagnated in most OECD countries since 2010, and disposable income inequality has been at historic highs for the last seven years.

- Those at the bottom of the income scale are hit particularly hard.

- Between 2009 and 2013 an additional 7.5 million people were classified as living with severe material deprivation across 27 EU countries.

- Over half of the population in 11 countries still report difficulties to make ends meet.

- Serious concerns about insufficient income in old age exist in two thirds of EU countries.

- The risk of relative in-work poverty has significantly increased, with 10% of European workers at risk of poverty in 2014 compared to 8% in 2007.

- 13% of European workers were materially deprived in 2014, highlighting the severe impact of the crisis on people’s living conditions.

- Approximately 1 in 10 Europeans — more than 50 million people — are unable to afford proper heating of their homes, with severe health and social consequences.

- Those hit hardest are society’s most vulnerable, including elderly people, migrants, young people and women.

- In addition, household over-indebtedness has become a concern, though it varies across countries.

- At the same time, private wealth has become more unequally distributed in recent decades. The richest one percent of Europeans are estimated to hold almost a third of the region’s wealth, while the bottom 40 percent of the population share less than one percent of Europe’s total net wealth.

- On a global level, in 2016, the eight richest billionaires controlled more wealth than the poorest 50 per cent of the world’s total population.

![Percentage of people at risk of poverty by country in Europe.](source: Eurostat)
DRIVERS OF INEQUALITY SOLUTIONS
In order to tackle the drivers behind the historically high levels of income and wealth inequality and in particular inequality in wages and employment situations, we need a shift away from austerity policies towards a system based on strong regulation of markets, including labour markets, reduced power of monopolies in strategic sectors, and protection of public services and social services of general interest from privatization and speculation. We need a system based on solidarity, fair redistribution of wealth, long-term sustainability and a broader notion of social responsibility which goes beyond personal economic gains and losses. We need a system that ensures people's well-being, giving power back to people, workers and consumers. This is the aim of our policy proposals.
European policy-making has been largely concerned with the efficiency of markets and the effectiveness of the four freedoms of movement enshrined in the EU treaties (goods, services, capital and people). This focus too often has left aside the EU’s objective of equality, fairness, well-being and a high level of employment, combating exclusion (as outlined in the TFEU e.g. preamble, Art. 8, Art. 9). Economic freedoms and competition rules have taken precedence over fundamental social rights, favouring capital over workers’ and consumers’ well-being.

The introduction of a monetary union with a centralised monetary policy, but without a common fiscal and taxation policy, has created systemic macroeconomic imbalances and pushed wages to become the main economic adjustment factor. In addition, existing economic governance tools, such as EU fiscal rules and macroeconomic imbalances procedure, do not provide much leverage for national fiscal measures that could deliver the necessary stimulus in aggregate demand countries need. The result of these policies, together with imposed austerity measures, has been a fall in investment, underemployment, stagnating wages and growing divergence across the EU.

Reinforce the social dimension of European public policies

In order to address these issues, combatting inequality, aiming at full employment and social well-being, must become an institutional priority at the top of the EU’s political agenda, feeding into all EU policies. The UN Sustainable Development Goals and goals for poverty eradication must be central to this.

"To address rising inequality, we need a coordinated approach to change the scope of the European semester and tackle income and wealth distribution. The semester’s aim must be clear: to improve working and living conditions.

Javi López, MEP"
This implies that:

- A social progress protocol should be added to the treaties, clarifying that neither economic freedoms nor competition rules take precedence over fundamental social rights.

- Democratic decision-making procedures must be strengthened and democratic control of institutions must involve a broad set of stakeholders, including a key role for the social partners, ensuring balance of power.40

The result of many EU policies, together with imposed austerity measures, has been a fall in investment, underemployment, stagnating wages and growing divergence across the EU.

- Measures evaluating performance and outcome of EU policies and economic policy coordination need to include inequality, social progress, social justice and the respect and promotion of collective and individual labour rights in the EU (e.g. social scoreboard).

- The European Semester and the Macroeconomic Imbalance Procedure (MIP) have to include new binding indicators for imbalances and inequality, considering economic performance as well as employment and social performance.

- Local and regional authorities, social partners and civil society, who know the realities on the ground, have to be closely involved when designing, implementing and evaluating policies and legislative measures.

Recover member states’ fiscal space and revise fiscal rules to ensure upward convergence

The EU’s budgetary framework must better promote and enable social investment, support for economic demand, and job creation leading to sustainable development and full employment.

- Member States need to recover the fiscal space for investment and need to support social security systems, social services, healthcare and domestic demand on both the national and European level.

- Building on our political family’s recent success in introducing flexibility in the Stability and Growth Pact, fiscal rules need to be revised to exempt public investment spending from calculations of public budgets. More expansionary policies should be allowed for and encouraged when demand is too low. This has to be a transparent process, ensuring predictability and equal treatment of budgets.

- The EMU must include a strong social dimension, being provided with the necessary legislative, institutional and financial means to generate true social progress.

- A Euro area budget should be introduced to counter the deflationary effects of a monetary union without a fiscal union, to ensure upward convergence and a stabilisation function.
FOSTER A COHESION POLICY BASED ON SOLIDARITY AND SUSTAINABLE DEVELOPMENT

As the EU’s main tool for reducing inequalities between and within its Member States, cohesion policy must be given the political power, human resources and financial means it needs, and it must remain a priority in the next Multiannual Financial Framework beyond 2020.41

- European funding for cohesion policy needs to increase.
- The new cohesion policy framework needs to support in particular, but not only, the poorest European regions, while cohesion policy funds must remain available to all regions.
- More emphasis must be put on social investment as part of cohesion policy.

- National co-funding of projects should not be taken into account in deficit calculations as part of the Stability and Growth Pact.
- Social and economic cohesion cannot continue to be held hostage to an austerity agenda. Conditionality should remain a mechanism that reinforces cohesion policy and the principle of solidarity between regions and Member States.
- Rules and procedures need to be simplified, unifying all cohesion related funds under a single regulatory framework.
- Grants should remain the standard form of financing.
- Furthermore, citizens have to be actively engaged and must have a say in shaping the policies that influence their daily lives.

GDP per country in Europe.

SOURCE: Eurostat
A well-functioning, healthy financial system is important for a market economy in order to make money available for productive use, benefiting the whole of society. Yet the so-called “financialisation” of the economy, which started in the late 70s with a deregulation of the financial system and cross-border financial flows, has led to the opposite, as an increasing share of savings, wealth and companies’ profit has not been invested in workers’ wages or the means of production, but instead in assets that already exist (e.g. real estate and stocks). This has led, on the one hand, to a concentration of wealth in the hands of the few, while on the other hand increasing asset prices for the many (e.g. house prices), resulting in an increasing indebtedness of households. The consequence is a boom and bust economy in which citizens, taxpayers and workers have to bear the costs. Greater concentration of wealth has given the financial sector greater influence over the economy and governing institutions, while the high financial rewards increasingly shape society’s values and practices.

**Encourage sustainable productive investment**

It is essential to tame the financial sector and make sure that it fulfils its mission of financing the real economy, for the well-being of people and the environment.

- A financial transaction tax should be introduced, designed in such a way that it encourages productive investment and discourages short-term behaviour. It should penalise short-term traders and incentivise longer holding periods, thus reducing instability and encouraging longer-term productive investment.

- Capital gains income could be taxed at the same rate as labour income, with short-term capital gains being taxed at a higher rate and targeted tax breaks used to incentivise sustainable productive investment.

“A financial transaction tax should be introduced, designed in such a way that it encourages productive investment and discourages short-term behaviour.
A sovereign or citizen wealth fund could help to spread ownership of capital and its gains more widely and ensure that a bigger share of the gains from economic activity is re-invested for productive use. One way to finance such a wealth fund could, for instance, be through a new additional, modest annual levy on share ownership to be used for explicit public purposes (e.g. social spending, infrastructure).

The state’s entrepreneurial role should not be overlooked and used for investing directly in projects based on social, job creation and benefit criteria, which are in the general interest and would otherwise find it difficult to secure finance.

Ensure a safe and sound financial system

In order to ensure a safe and sound financial system and to protect citizens from financial and economic crises the following measures could be considered:

- The Banking Union needs to be completed, making sure that people’s savings are secured through a European Deposit Insurance Scheme (EDIS).
- Further measures could bring transparency to all financial markets, end the phenomenon of institutions that are viewed as “too big to fail”, regulate the shadow banking sector, end offshore banking, enforce rules with stricter penalties, or establish a firm ring-fence between investment and retail banking that will protect consumers.
- Public banking and development banks should be supported and expanded as a basis for economic development and stable and equitable access to finance.

Inequality is at the root of the crisis we are in and the crisis is reinforcing inequality. We need to break this vicious circle through social investment and fairer distribution. We need a real FTT, we need to put a limit to indecent executive pay, we need fair progressive tax systems, we need to end tax evasion.

Conny Reuter, Secretary General of SOLIDAR, Civil Society
END THE SHORT-TERM, PROFIT-MAXIMISING MODEL OF CORPORATE GOVERNANCE

The move towards a model of corporate governance which focuses on short-term profit maximisation and returns to shareholders, rather than investment in long-term sustainability and innovation, has led to a further shift of power away from workers and citizens. Together with the liberalisation of trade and capital markets, this model has benefited the rise of large and often multinational corporations, which have gained significant market power and strength at the expense of customers, workers and governments, resulting in a global system which too often exploits workers, scams consumers and steals from public resources.

Driven by incentive schemes which link executive compensation to share prices and short-term tenures, CEOs’ incomes have increased disproportionately and companies have become sources of cash for financiers, resulting in profits that do not make their way into workers’ wages, while reducing investment that leads to sustainable innovation and long-term prosperity.

The aim of maximising short-term profits has further led to a corporate model based on price competition and avoidance of obligations, both social and environmental. In addition, it has led to downward pressure on workers’ and producers’ pay and on labour and environmental standards, with corporations paying as little tax as possible. Great economic power has led to ever greater political power and influence, built on inequality in industrial relations along global supply chains and corporations’ connections to politics and political parties with ideological affinities. This has favoured the adoption of regulations and policies designed in ways that allow the current system to continue.
SUPPORT STRONGER WORKER REPRESENTATION IN WORKPLACES AND DEMOCRATIC EMPLOYEE OWNERSHIP

In order to ensure a just distribution of profits and an economy that works for the many, it is crucial that power is given back to workers. European Work Councils enable the common representation of workers from different European countries in which a multinational company has operations. The role of trade union organisations within European Work Councils must be recognised and supported more fully throughout the whole process of democracy, information and consultation in the workplace.

The implementation of the Directive on European Work Councils remains problematic. The European Commission should therefore take urgent measures to reassess the Directive, to strengthen information and consultation requirements and make collective agreements mandatory for restructuring processes.

Social dialogue needs to be further strengthened and developed in all workplaces, and more commitment is needed from the EU to protect and promote social partner autonomy and social partner agreements.

European policies need to support worker and employee representation on company boards and supportive policies. Legal frameworks should be set to increase the share of the economy made up of mutuals, cooperatives or employee owned companies.

Share ownership combined with participative management should be further encouraged. This could include promoting transfer of a proportion of shares each year, encouraging retiring owners to pass their companies to employees or preventing employees from selling their companies back to external shareholders.

Promote a private sector that works for the many

Corporate governance needs to be rethought to guarantee a just distribution of profits and long-term sustainability. Corporate governance needs to be rethought to guarantee a just distribution of profits and long-term sustainability, ending the focus on short-term profit maximisation and returns to shareholders. In order to achieve this, a change in the incentive structure for executive pay is needed. This could include:

- Taxes on equity-heavy compensation.
- The mandatory requirement for companies to disclose the ratio of executive pay to the median employee salary.
- Mandatory reporting of the full value of executive compensation for each corporation.
A requirement for elected employee representatives to be part of remuneration committees.67

Mandatory annual shareholder votes on executive compensation.

Corporate tax rates being pegged to the ratio of CEO to median worker pay.48

A cap on executive pay (e.g. 12 times that of the lowest paid worker69 or 20:170).

In addition to these measures, governments need to promote business models that focus on long-term sustainability and a broader notion of social responsibility which goes beyond making profits at any cost.71 Strong standards, clear rules and control mechanisms have to be ensured, guaranteeing that no company can escape its fiscal social, and environmental responsibilities.72

Limits to and controls on outsourcing and offshoring need to be set, and mandatory supply chain liability and due diligence put in place.

There should be incentives to reform economic performance indicators, focusing on long-term sustainable growth, investments in innovation and value creation.73

Public procurement contracts need to include quality, social and environmental criteria, and contractors should be held responsible for the performance of sub-contractors lower down the supply chain.74 Public procurement could also include a maximum pay ratio (e.g. 20:1), as well as a move towards including contracted firms under the remit of freedom of information rules, in order to foster greater transparency in the provision of public services.

European rules on public procurement need to include a collective bargaining social clause, ensuring respect for labour law and collective agreements. The presence of collective bargaining must be a key award criterion.75

States have to challenge the concentration of power in the hands of large multinational corporations through regulation as well as other means, strengthening democratic processes.

“Fighting inequality is a question of credibility. Why are there inequalities? Because of neoliberal policies and capitalism gone berserk. We have to put in place the measures to reverse this: minimum wages, a child guarantee, digital training, a ban on zero hour contracts.

Nicolas Schmit, Chairperson of the PES Social and Employment Ministers Network, Minister of Luxembourg
CHALLENGES OF THE DIGITAL REVOLUTION AND INEQUALITY IN INNOVATION PROCESSES

The direction taken by innovation and technological change and their outcomes are not a matter of destiny, but the result of deliberate decisions taken by economic and political institutions.

Developments such as the move towards a digital economy and increasing automatisation can and need to be actively shaped for the benefit of people. While the digital revolution has great potential, it also risks opening the door to increasing polarisation of employment (e.g. ICT, clickworker, increase of low skill jobs, eliminating jobs due to automatisation), as well as excluding large parts of society who are less familiar with information and communication technology (e.g. elderly people), deterring them from equally participating in the digital economy, labour market and the information society at large. It further carries the risk of workforce casualisation, undermining labour standards, facilitating precarious employment models and the digital control of workers, as well as leading to a race to the bottom in labour costs and wages in Europe and globally. If not managed well, this will result in increased inequality in wages and employment situations.

Furthermore, it is not only the outcome of technological change but the innovation-creating process itself which can lead to inequality. While the state is often responsible for main innovations (e.g. internet, nanotech) and risk is taken collectively (workers, taxpayers), profits created from it are increasingly privatised, benefiting actors who did not contribute to the process of value creation and manage to escape taxation. This reinforces an unfair contribution of profits. The state makes and shapes markets, rather than merely fixing them, so it must play a crucial role in directing technological change and innovation to benefit the many.

"A digital economy that serves the people: that is what we want! Not only to ensure that people can have the advantage of smart app’s, but also that workers in the gig-economy have rights and social protection. Everybody deserves a fair share of the benefits of the digital economy!"

Agnes Jongerius, MEP, Employment Committee of the European Parliament
While the digital revolution has great potential, it also risks opening the door to increasing polarisation of employment, as well as excluding large parts of society.

**Ensure workers’ rights and social progress in the digital economy**

To ensure a digital economy that guarantees people’s well-being and a fair distribution of its rewards, it is vital to extend workers’ rights and social protection to non-standard forms of work, as we have outlined in “Workers’ rights and social progress in the digital economy”.

- Upskilling, training, retraining and life-long learning opportunities must become a right for everyone, allowing people to gain digital and ICT skills at all ages, from an early age onwards. This will allow everyone to participate equally in the digital economy, whether low-skilled, medium or highly skilled.

- The gender dimension must also be taken into account regarding lifelong learning and digital skills. More must be done to attract girls and women to ICT and other digital jobs, and improve gender balance in the sector. Flexibility is crucial in offering continuous training that does not negatively impact on the work/life balance.

- Workers’ activities and rights have to be recognised and registered, ensuring portability of rights. Workers’ status in new forms of employment has to be clarified. This includes extending employee status to platform workers and bogus self-employed people; broadening the definition of employment; strengthening support for individual self-employed people; and clarifying the definition of employer/employee relationships. The proposed EU directive on transparent and predictable working conditions in the EU is an opportunity to answer to these challenges.
Solo self-employed people must have the right to organise, and collective agreements must be extended to non-standard forms of employment, ensuring that companies operating a platform business participate in social dialogue.

Universal digital and non-digital access to services needs to be guaranteed for everybody. In an increasingly digital society, it is essential to acknowledge the importance of maintaining non-digital services in order to reach people who lack digital access.

Governments need to direct technological change in the world of work to the benefit of people and the planet. Distributional impact, how socially useful technological change is and the need to “conserve roles where the human touch is a core part” have to determine their actions.

Gains in productivity allowed by new technologies should be seen as opportunities to further reduce working time without loss of revenue.

Promote an innovation-creating process for the many

EU policy-making and budgets that direct technological development that drives broadly shared prosperity and is in the interests of people and the environment.

European policies should support business organisations which guarantee to allocate corporate resources to investments in innovation and to distribute corporate returns equitably to contributors who enable innovation.

Companies that have tapped resources provided by the state as a foundation for successful innovation should have to return a percentage of the gains they have made to the state, over and above tax payments at the normal rates. (Both patents and copyrights could be designed in such a way).

Governments need to revise copyright and patent laws so that ownership of intellectual property is managed in the interest of society and “those who produce valuable goods and services can be paid in ways which do not restrict access to their products”.

R&D tax credits, if granted, should be designed to encourage necessary investment in innovation.
Inequalities in Europe have been further increased since the 1990s by neoliberal policies, austerity measures and “structural reforms” aiming at liberalising and privatising economies, in particular after the financial crisis in 2008. The PES has already outlined alternatives in its PES Programme for Progressive Reforms, putting the fight against inequality at the heart of its programme. We remain committed to changing the focus of reforms, bringing in progressive reforms for fairer, more sustainable and more equal societies.

Weakening of trade unions and collective bargaining

The weakening of trade unions and the labour movement generated a shift of power away from workers towards capital and an economy for the few, no longer providing the opportunity to negotiate a fair share for workers. It has happened progressively through a decrease in collective bargaining coverage, attacks on social partner autonomy at all levels, de-unionisation in many EU countries, and continuing restrictions on trade union activities by European and national labour courts (e.g. Viking case).

Policies pursued in the follow-up to the crisis dismantled legal measures which supported collective bargaining and wide coverage. They also led to a general wage moderation. The European Commission continues to promote internal devaluation regarding wages and collective bargaining in its country-specific recommendations.
also prevented the reduction of the firms’ exploitation of their market power.\textsuperscript{33} In addition, in many EU countries the minimum wage remains too low for even a full-time worker to sustain a decent standard of living.\textsuperscript{34}

**Promote higher wages and strengthen trade unions**

To reverse the shift of power away from workers, trade unions have to be strengthened. To combat wage competition strategies and wage moderation, a pay rise is urgently needed.

- Wages need to match productivity gains. Productivity has been rising faster than wages for more than 30 years, with wages declining as a proportion of wealth, leading to greater inequality and undermining social cohesion.\textsuperscript{35}

- In order to boost wages across Europe, we want minimum wages at no less than 60% of the national median income and in any case above the poverty level, reached either through law or collective bargaining. This objective should be enshrined in the EU’s economic governance and in its main tool, the European Semester.\textsuperscript{36}

“During the years of crisis and austerity measures, wages have too often been pushed downwards. We need to reverse this trend. All workers deserve a pay rise, and some deserve a bigger pay rise to narrow the gap between the better paid and the low paid.

Esther Lynch, Confederal Secretary of the European Trade Union Confederation
A living wage index should be created in the context of the Annual Growth Survey forming the basis for binding targets on Member States’ actions.\textsuperscript{97}

We must end age-based discrimination in access to minimum wages.\textsuperscript{98}

Trade unions and the right to collective bargaining need to be strengthened, and the autonomy of social partners needs to be respected. The EU and Member States must invest in social dialogue and capacity-building for trade unions,\textsuperscript{99} and funding for this must also be made available to EU-level organisations such as the European trade union federations.

The Commission and Member States need to commit to implementing reforms, strengthening workers’ rights and fostering the bargaining power of employees, widening collective bargaining coverage and promoting unionisation.

Workers’ representation at company level has to be combined with strong sectoral collective bargaining.

Agreements of social partners at EU, international and national level have to be respected.
Deregulation of labour markets, rise in precarious jobs and underemployment

Neoliberal “structural reforms” have increasingly undermined labour standards, social security systems and workers’ rights in the name of labour market flexibility. They have deregulated labour markets and weakened employment legislation. This has been done with the promise of making permanent employment more attractive, and of promoting overall employment.

Yet “structural reforms” have boosted non-standard forms of employment in the decade running up to the crisis, during the crisis and again after the first wave of the crisis, without generating an increase in demand for labour. In 2016, the actual number of jobs was still lower than in 2008. The total proportion of long-term unemployed people continued growing from 2013 to 2015. Newly-created jobs are mainly temporary or part-time. According to the ETUC, almost one in five jobs are part-time and over 14% are fixed-term. Almost one quarter of the EU labour market is made up of non-standard jobs, whether self-employed or not, which do not enjoy a fair remuneration and the same rights as normal employees.

Instead of improving the situation for workers, “structural reforms” have reinforced incentives for firms to compete on low wages and to provide less social protection, rather than competing on sustainability, innovation and productivity, leaving more and more workers without job security, sufficient remuneration or social protection, thereby further increasing inequality.

Foster decent working conditions

Decent working conditions have to be guaranteed for all workers. Therefore we call for:

- An EU framework directive on decent working conditions for all forms of employment which guarantees every worker a core set of enforceable rights, getting rid of discrimination based on contractual status.

- A framework for quality, paid internships
and apprenticeships, based on a contractual relationship between the trainee and employer, specifying rights and obligations for each, notably in terms of length, remuneration and insurance.\textsuperscript{105}

- A ban on the most precarious forms of work, such as zero-hour contracts.

- Effective enforcement of labour standards to ensure decent working conditions. On a European level, this could be supported by a European Labour Authority with effective powers and financial means, respecting national practices and the role and autonomy of social partners in each of the Member States.\textsuperscript{106} It should closely involve social partners in its governance.

- Age-friendly working conditions at the workplace. Special attention should be given to flexible end-of-career opportunities without losing pension rights, including working-time reduction according to occupational arduousness.

**Cuts in public spending and reduction of social protection**

The deregulation of the labour market has been accompanied by a reduction in social protection expenditure which could have protected those suffering from income insecurity.\textsuperscript{107} This is particularly the case in Member States which had to adopt financial support programmes, despite the fact that these are arguably the countries with the greatest need for a safety net.\textsuperscript{108}

A fall in social security budgets has meant a cut in support and services for Europe’s poorest.\textsuperscript{109} Health, education, housing, pensions and social policy programmes have been greatly underfunded. In 2010, spending on health in Europe recorded its first drop in decades.\textsuperscript{110} These cuts have had a grave impact on inequality and society at large. In addition, spending for active labour market policies and out-of-work income support has been declining. This is particularly worrisome given the enormous unemployment challenge in Europe inherited from the economic crisis.\textsuperscript{111} Social policies and the welfare system must cease to be perceived as a budgetary burden, and instead be seen as a productive social investment.
We have a social project for Europe. Yet we still need to make sure that in the EU neither economic freedoms nor competition rules take precedence over fundamental social rights. Building on the European Pillar of Social rights, a social progress protocol should be added to the treaties.

Stefan Gran, Director of the EU liaison office of the German Trade Union Confederation

Strengthen social protection and protect workers and citizens in hard times

Strong welfare systems and social protection are crucial for fighting inequality. Governments are the most efficient and effective provider of many public services, especially those with natural monopolies or those that involve values that are not adequately reflected by price. The European Union must support Member States in strengthening their welfare systems (education, health, pensions and transfers), ensuring a more effective redistribution and fairer distribution, taking into account new social risks and vulnerable groups. We must guarantee high-quality public services that ensure effective and timely access for all to social and age-friendly housing, affordable healthcare (both preventive and curative), public health services, and care including long-term care.

A European legal framework must be put in place to guarantee every European citizen — and all workers in all forms of employment and work arrangements — a social protection floor, with universal and equal access to social protection rights, benefits and entitlements, quality healthcare, minimum income security and access to the goods and services defined as necessary at national level — in line with the related ILO recommendation, providing an effective social security net which can be deployed in hard times.
Social protection coverage must be mandatory. The full portability and accumulation of rights, benefits and entitlements must be guaranteed, no matter the form or duration of employment.

A European unemployment insurance scheme, complementing current national benefit systems, could function as an automatic stabiliser and play an important role in reducing inequality between countries, absorbing shocks.

Additional focus needs to be put on long-term unemployed people, ensuring the implementation of reforms outlined in the Council Recommendation on labour market integration of long-term unemployed people through the European Social Fund and the European Semester.114

Public hiring for projects of general interest could be considered as one measure to tackle unemployment, building on the practice of “zero long-term unemployed territories”.115

Special attention must be given to the growing inequalities in health due to socio-economic gaps.

An investment strategy led by social objectives

To reverse the State’s withdrawal from social policies, it is time to promote real social investment. This encompasses investing in education and people, investing in solid welfare systems and investing in social infrastructure.

“Combatting inequality must be a common priority, placed at the top of the EU’s political agenda. An effective strategy requires a budgetary arm as well, with a robust investment capacity. There must be a more clear focus on social investment both at European and national level.

Laszlo Andor, Head of Department and Associate Professor at the Corvinus University of Budapest and former EU Commissioner
To ensure the well-being and self-development of all children in Europe, it is essential to invest in the fight against child poverty. Children in Europe must be guaranteed free healthcare, free education, free child care, decent housing and adequate nutrition as part of a Child Guarantee. In addition, “a Child Benefit could be paid for all children at a substantial rate and should be taxed as income”.

In order to effectively support young people entering the labour market, funding for the European Youth Guarantee must be extended and strengthened with additional funds from 2020 onwards, ensuring its equal implementation throughout all Member States as well as equal opportunities for all young people.

For States to be able to deploy reliable social security systems, there is a need for regular and increased investment in social infrastructure and in social services. Investing in social services creates jobs, brings added economic value and contributes to the wellbeing of all. The EU must prioritise these objectives and provide the space for Member States to deliver.

Ensuring that public services have the means to carry out their mission is crucial for effective access to social housing, healthcare, care and essential services.

The EU’s next Multiannual Financial Framework should provide space for social investment and investment in social infrastructure, such as affordable and quality housing or healthcare.

In parallel, specific investment pursuing non-exclusively social objectives, such as investment in energy efficiency, should encompass a strong social dimension. Public investment efforts could for example be directed towards the fight against energy poverty and enable access to affordable, safe and clean energy for everyone. This can be done through targeted renovation offers, incentives for social landlords to do retrofitting works and promotion of energy self-generation.

The European Union must support Member States in strengthening their welfare systems.
Taxation is a fundamental aspect of living in a society, making sure everyone contributes with his or her fair share.

However, rather than building a fair tax system which corrects inequality, trends within Europe have been going in the opposite direction, fostering tax competition. Reduced progressivity of the tax system has led to those at the top paying less, while making the rest pay more or receive lower levels of public services. There is no evidence, as often proposed, that this has led to any more investment, jobs or growth.

“Structural reforms” advocating a shift away from capital towards taxes on consumption have been putting an unfair burden on average citizens and the most vulnerable among them. At the same time, revenues from top corporate income tax rates have dramatically fallen, with taxes on corporate income only accounting for a small share of tax revenue in the EU. This is partly due to reduced headline tax rates and various exemptions (e.g. “patent boxes” in 12 EU states) which States grant corporations as they compete to keep or attract investment, as well as to the development of the digital economy and deals or legal loopholes, such as transfer pricing and advanced pricing agreements, or tax treaties, all allowing multinational corporations to pay little tax on profits.

Defences put in place are generally leaky and weak, resulting in international tax systems growing ever more complex, providing further opportunity for rent seeking. This means corporation tax no longer serves as a crucial backstop for personal income tax, and no longer prevents wealthy individuals from redefining their income in a corporate form in order to pay lower tax rates. In addition, tax rates on wealth and on top incomes have continued to fall and private wealth held in offshore accounts has been growing rapidly, with a great part of it appearing not to be taxed. Estimates of global private financial wealth held in tax havens range from $7.6 trillion (2013) to up to $32 trillion (2014).

Rather than building a fair tax system which corrects inequality, trends within Europe have been going in the opposite direction.
The platform economy, like every sector, must pay tax and social contributions and comply with employment and social legislation.

Ensure a progressive tax system

A fair, progressive tax system is a central element in combating inequality. This means a tax system where everybody contributes to society according to their means. In order to achieve this the following measures could be taken:

- Progressivity of personal income tax could be increased by introducing a rate structure where marginal rates of tax increase by ranges of taxable income, accompanied by a broadening of the tax base.
- Progressivity could be improved by introducing “into the personal income tax an Earned Income Discount, limited to the first band of earnings”.
- Receipts of inheritance and gifts inter vivos could be taxed under a progressive lifetime capital receipts tax and a proportional, or progressive, property tax, based on up-to-date property assessment.
- While mostly of national competence, these are measures European institutions could promote through their country-specific recommendations.

Make sure digital platforms contribute with their fair share

Platform economy companies are often international and declare their profit where tax rates are lower. Clearly, there is a temptation in the digital economy and especially the platform economy to use outsourcing and dumping as a business model. It is thus essential to ensure international companies pay their fair share of national taxes and charges where their activity takes place.

- The platform economy, like every sector, must pay tax and social contributions and comply with employment and social legislation.
- Technological means exist to integrate the cost of social protection in new forms of work; we need to ensure they are used, for example by collecting a tax on each online transaction.
- To mitigate the impact of robotics and artificial intelligence on the labour market, taxes on the work performed by a robot or a fee for the use and maintenance of a robot should be envisaged.
- Efforts must be further intensified to design and implement EU regulation and international negotiated solutions. They must be set as the highest priority at EU and international level.
- Additional solutions could be built on the example of existing agreements between platforms and local authorities.
End unfair competition and money laundering

Corporate tax is a progressive tax and revenue generated from it is important to address inequality. In order to make the current corporate tax system fairer and more transparent, putting an end to a fiscal race to the bottom, the following measures could be taken.  

- The race to the bottom in rates of corporate tax needs to be ended.
- The Common Consolidated Corporate Tax Base (CCCTB) proposed by the European Commission should be implemented, taxing transnational corporations according to the genuine economic substance of what they do, treating them like unitary wholes. Similar forms of unitary taxation should be pursued on an international level.
- Transparency, cooperation and coordination should be ensured through country-by-country reporting, automatic information exchange of bank data between jurisdictions on a multilateral basis, and a global and European financial register, bringing an end to financial secrecy by identifying ultimate beneficial ownership.
- Stronger sanctions should be established for banks, legal entities and individuals that assist tax fraud or evasion.
- We must fight money laundering, tax avoidance and tax havens.
- Whistle-blowers need to be fully protected.
SOCIAL, GENDER AND INTERGENERATIONAL INEQUALITIES

Inequality in wages, employment situations and disposable income has been worsened by structures that prevent minorities or women from equal access to services or competing on a level playing field in the workforce, gaining equal wages.

The historically high levels of inequality do not only have severe implications for our societies here and now, but also lead to intergenerational injustice if not addressed effectively. Deprivations and inequalities in wages, employment situations or regressive distribution policies faced by one generation create unequal opportunities for the next generation and in old age, further deepening existing inequalities. On this, too, action is urgently needed.

In order to effectively address inequality, every form of discrimination and exclusion must become history. Any kind of discrimination is unacceptable, be it based on race, disability, religion, long-term illness, origin, age, gender, gender identity, or sexual orientation.

- The 2008 Equal Treatment Directive needs to be finally adopted, and the full implementation of the Accessibility Act ensured.\textsuperscript{131}

- Discrimination in accessing employment has to be fought, putting in place financial incentives for the recruitment of discriminated groups as well as effective sanctions against employers who pursue discriminatory practices.\textsuperscript{132}

- Gender inequality must come to an end, closing the gender pay and pension gap. Targets to reduce the gender pay gap (2% each year) and wage discrimination must be promoted, making sure that the Commission establishes these targets as part of the European Semester in its Annual Growth Survey and Country Specific Recommendations.\textsuperscript{133}

- Effective mechanisms respecting national collective bargaining practices, such as pay gap audits, need to be employed in order to support this process.\textsuperscript{134}

- The Commission’s proposed work-life balance legislative package needs to be completed, including a proposal for a new Maternity Leave Directive, Parental and Paternity Leave Directive and a directive on long-term care and carers.
Ensure a society where every generation can live in dignity

Every generation must be able to live in dignity. The following policy proposals, together with those proposed above, aim at addressing intergenerational inequality.

- Every child and young person needs to receive the best possible education, ensuring that the pupil’s personal biography is no longer the key factor to success, but rather his or her performance and talent. This includes early childhood care and education, ensuring tailored homework support, as well as investment in education and training, making sure that everyone has a secondary education, guaranteeing a Skills Guarantee for everyone.

- There need to be stronger incentives for students in low income households to enter university (including maintenance grants to help with living costs), but also greater support to undertake vocational training and apprenticeships. Student loans must be controlled and limited, making university fees (including at Masters level) affordable for all.

- A European legal framework should be introduced, ensuring that every citizen receives a minimum pension that depends on national average wages. Every Member State should be obliged to gradually lift the minimum pension above the poverty threshold (60% of national median income).  

- Governments could explore the possibility to “offer via national savings bonds a guaranteed positive real rate of interest on savings, with a maximum holding per person”, 136 which could support pensioners.

- Developing life-cycle approaches at the workplace can help keep older people in employment for longer and transfer knowledge and experience across generations. These approaches ensure healthy working environments and foster interaction, cooperation and solidarity between the different age groups.
Conclusion

A viable basis for the future of our society can only be found if we successfully tackle income and wealth inequality and fight against inequality in all spheres of our societies, ensuring universal access to knowledge and power.

The high levels of inequality which we are facing are not automatic or inevitable. They are the result of political choices that shape policies and structures that guide our economy, determining how we live together. It is these policies and structures that have led to an economy that only works for the few and shifts power away from workers and citizens towards capital, favouring capital over the wellbeing of workers and citizens. As socialists, we are continuously challenging these policies and fighting to reshape these structures.

We will continue to fight for these values in the upcoming European elections: a democratic society and economy that works for everyone — a society where everyone can live in dignity.

Income and wealth inequality – trends and current situation

20 except Netherlands decrease during 2000s after an increase in mid 1990s

24 Whereas in the 1980s, the average disposable income of the richest 10% was around seven times higher than that of the poorest 10%, today, it is around 9½ times higher. The OECD estimates that on average in the OECD area, the top decile of household disposable income distribution accounts for 25% of total household income. OECD (2017)

25 This might be due to a softening of automatic stabilisers as the economy recovers in some countries or phasing out of fiscal stimulus measures implemented in the early years of the crisis, OECD (2017) Income inequality remains high in the face of weak recovery

26 In southern European countries, ever since 2007, real incomes at the bottom 10% have been falling between 12% and 28% annually.

28 The European Quality of Life Survey 2018

29 https://www.eurofound.europa.eu/eqls2016#1

31 The magnitude of household liabilities (a share of total assets) varies a great deal across countries, ranging from 4% in Italy and the Slovak Republic to over 30% in the Netherlands, mostly linked to mortgages, however, in some countries loans on other residential property and other types of loans represent a substantial fraction of total liabilities. While the incidence of debt increases with a household’s income, over-indebtedness is highest among middle — income groups and among households headed by young people. OECD (2017)
